Adsorption of lead, cadmium, and mercury ions in aqueous solution using groundnut and sheanut shells biochars

The adsorption performance of toxic ions and effect of initial pH using groundnut shells and sheanut shells biochars were studied to ascertain the practical and theoretical basis of the use of biochars to remediate water pollution. Biochars were prepared using groundnut and sheanut shells as the feed stocks. The removal efficiencies of lead (Pb) were 100% > 65.80% for cadmium (Cd) and 96.70% for mercury (Hg) in mono.
